MedWand Solutions, Inc. Offers Low-Cost Solution with VirtualCare Kiosk Services for MedWand Multi-sensor Device & Telemedicine Platform

(Rancho Santa Margarita, CA) July 13, 2023 – Leading the way in delivering digital healthcare technologies for clinicians and patients, **MedWand Solutions, Inc.** is pleased to announce the launch of **VirtualCare Kiosk services** for the MedWand telemedicine platform.

MedWand's VirtualCare Kiosk services offer providers an innovative solution to conducting comprehensive MedWand exams from various locations, including patients' homes, regional clinics, or any distant remote areas. This convenient feature enables providers to effortlessly review and share examination results with fellow clinicians in their network, eliminating the need for extensive time and costly formal EHR integration.

“What started as a multi-sensor device to enable doctors to examine patients remotely via the internet has developed into an entire ecosystem that, when appropriately administered, provides a bridge to universal access to high-quality healthcare and health equity,” said Robert Rose, MedWand President and CEO. “This software option now provides MedWand users a low-cost solution to challenges posed by IT department workload, which often hinders the adoption of new technologies. Our VirtualCare Kiosk services enables providers to deploy a comprehensive solution that increases clinical staffing efficiency, improves access to quality healthcare, and enhances patient satisfaction.”

MedWand revolutionizes healthcare by offering comprehensive solutions to nurses and providers, elevating care decision-making and operational efficiency. Featuring a clinically accurate multi-sensor device, MedWand encompasses a non-contact thermometer, digital stethoscope, pulse oximeter, ECG*, and UHD camera, seamlessly integrated with a supplied 10" Android OS tablet and VirtualCare software. Furthermore, the flexibility of MedWand allows for the inclusion of additional external sensors, such as blood pressure, blood sugar level,

weight, height, pain, and spirometry, which can effortlessly be added to an exam report via Bluetooth wireless connection or manual entry, depending on the specific sensor type.

The MedWand device and its associated VirtualCare telemedicine platform were created by a team of physicians and medical device engineers to enhance the quality and accessibility of digital healthcare services for clinicians and patients, regardless of physical location. The company offers the MedWand device and the companion VirtualCare telemedicine platform for multiple applications, including hospitals, field clinics, nursing homes, schools, and workplaces.

When patient care depends on telemedicine, choose MedWand. To schedule a demonstration or to request product quotation please contact MedWand at www.medwandhealth.com/contact For more information on MedWand and the VirtualCare platform visit www.medwandhealth.com.
